

# How to Connect to your Home WiFi or Hotspot

On a Windows PC:

1. Click on the WiFi icon  in the bottom right-hand corner.

- If you don't see it, try clicking on the arrow in the same area.
- Or, search for "Wifi" in the search bar located in the bottom left-hand corner and select "Change WiFi settings."

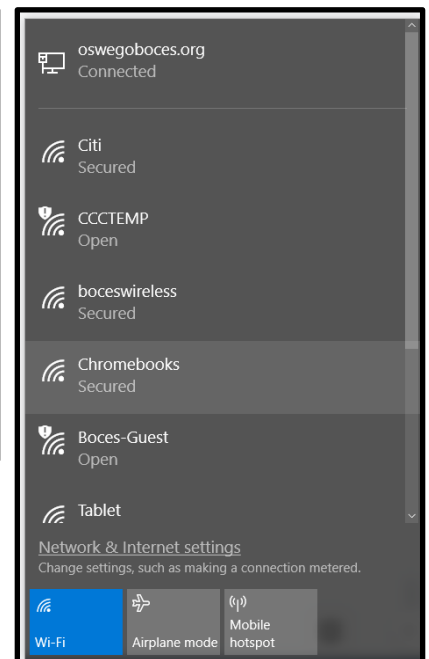

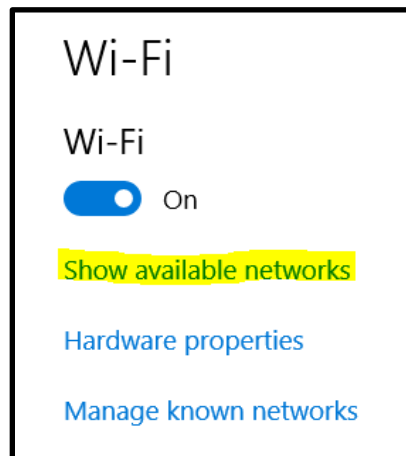

2. Click on "Show available networks."

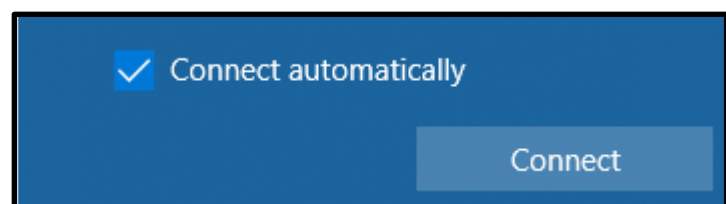

3. Find and click on your WiFi's name in the list that appears.

a. If you don't know your WiFi's name, it may be on your router (and may be called the SSID).

- i. Spectrum- it will be on a label on the bottom of your router or router/modem combo, or in your installation paperwork.
- ii. Verizon- the default SSID will be on your router label.
- iii. Windstream- on the back of the router.
- iv. Phone hotspot- follow the directions provided on your device.

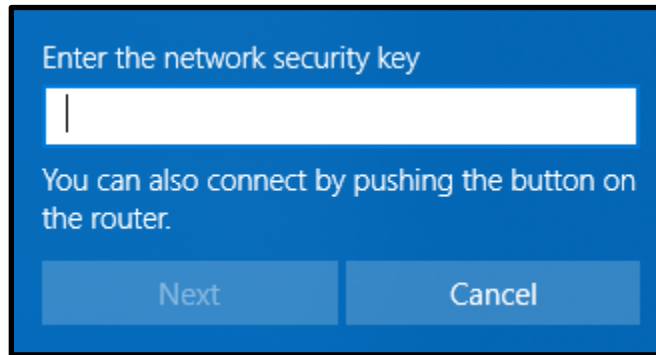

4. Click on the "Connect" button.

5. Type the password for your WiFi in the box and click “Next.”

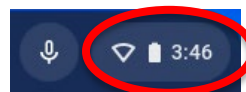

- a. If you don’t know your WiFi’s password, it may be on your router (see step 2).

6. If you are connected, the WiFi icon will change to

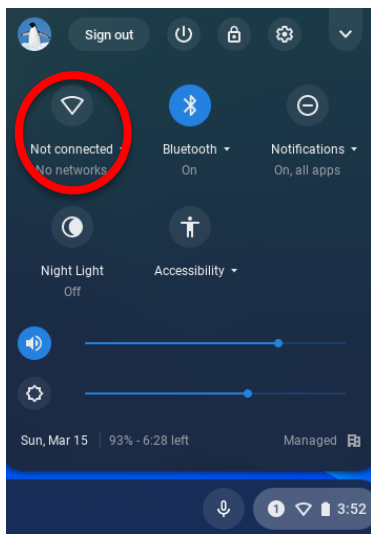

## Chromebook:

1. Click on the icons in the bottom right-hand corner.

2. You should see a button that says “Not connected.” Click on it.

3. You should see a list of available networks. Choose your home network.

- a. If there is a password, you will be prompted to enter it. Your parents may need to enter this for you.
- b. If your network is hidden, click on the WiFi+ symbol

4. You will see a green “Connected” under your WiFi name if you have successfully connected.
